

Bee City USA - Vandalia

Report on 2020

Pollinator Habitat Creation & Enhancement

Mentioned above – we used several packets of pollinator-friendly seed mix, that we have been selling to the public, in two 50-foot flower beds created for the first time.

Fifty-foot pollinator flower beds on either side of Vandalia Art Park / Society Rotary Bridge

Education & Outreach

The only pollinator conservation event we hosted was the tilling and planting of two fifty-foot pollinator annual/perrinial gardens on The Historical Society of Vandalia Butler property adjoining the City of Vandalia Art park Rotary Bridge the connects a walking path between the park and the society. Normally we participate with the City in a annual opening of the Art Park with a joint event but this did not happen because of COVID concerns.

Policies & Practices

At this time we have been focused more on developing more habitat areas and sharing information with the community about pollinator plants. We are trying to research and share more information about pollinator pest control.
